WHY SIXB

# We make disconnected systems work as one.

01

## The problem

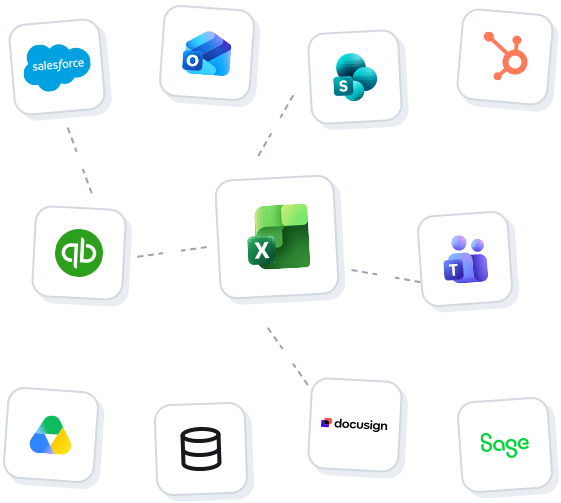
Companies have invested heavily in their systems.

**But the systems don't work together.**

So people fill the gaps:

- Copying information
- Chasing things down
- Updating by hand

There's no accurate view of the business. And every system returns less than it should.



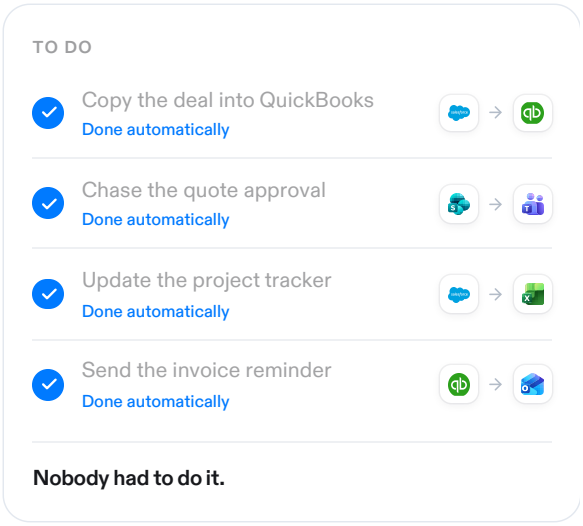
02

## What we do

We don't replace these systems. We make them work together.

We put them to their full use.

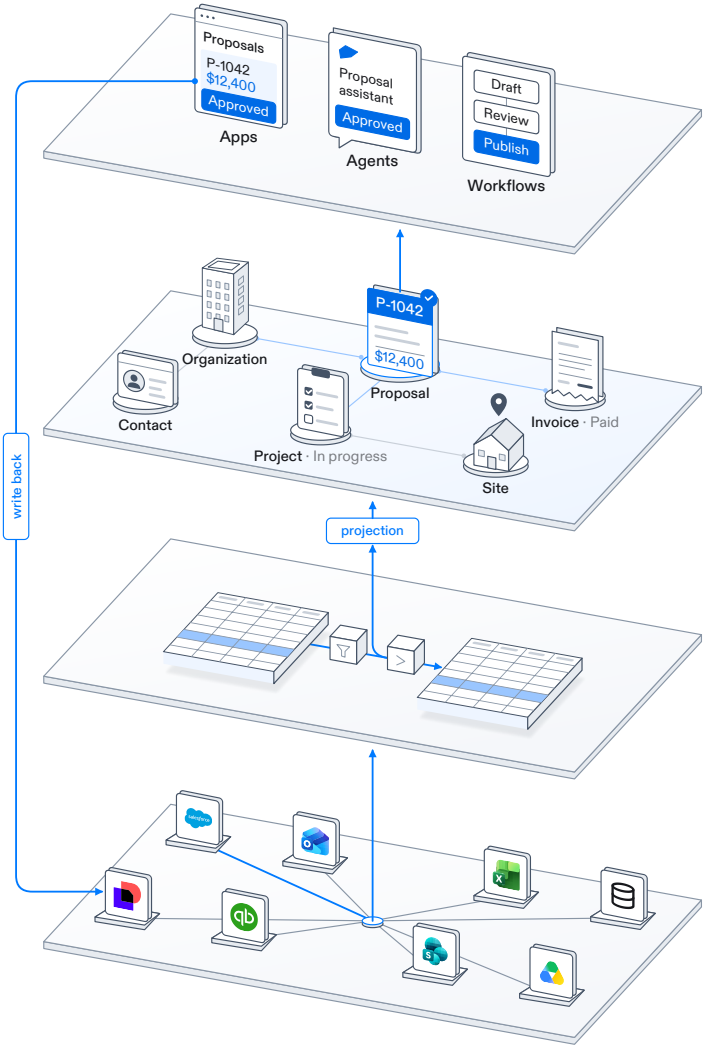
We remove the work employees hate. The copying, the chasing, the updating by hand.



03

## How it works

| | |
|---|---|
| **Connect** | Pull from anywhere. |
| **Prepare** | Clean and shape messy data. |
| **Map** | Real business objects. Right status. Linked together. |
| **Build** | Apps, agents, and workflows on top. |
| **Write back** | Changes flow back to the source. |



04

## The best part: you own it

This is not another SaaS product. You don't rent it. You own it.

We build on our open-source framework. Everything we build for you is yours: the system, your data, your business logic.

Use any AI model. Switch whenever something better comes out.

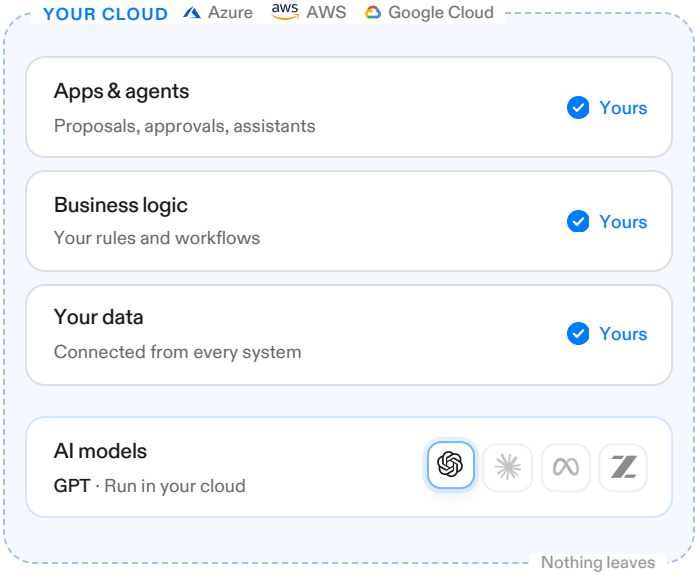
Model your domain. Put it to work.
Open source MIT TypeScript



05

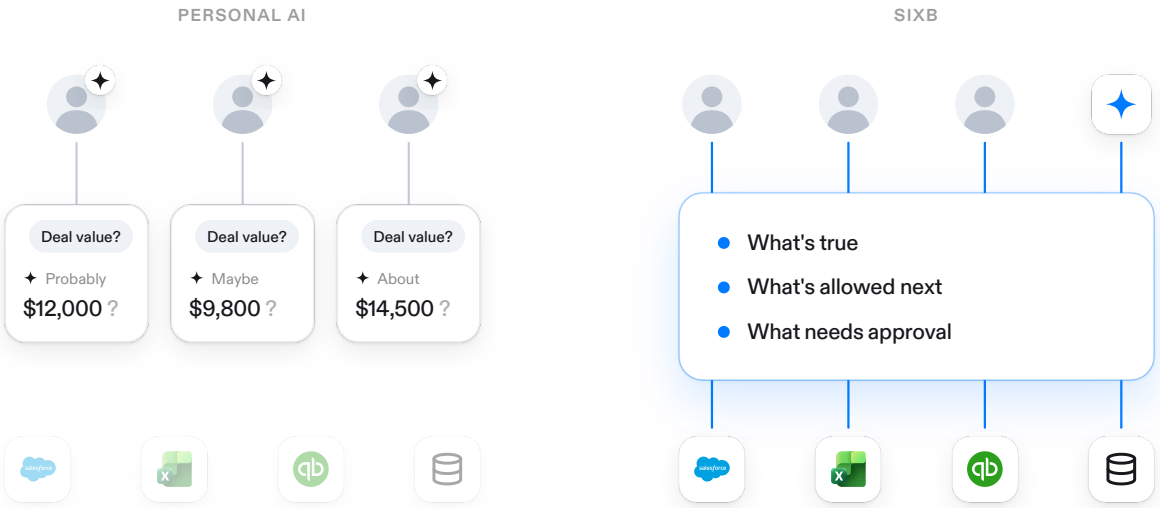
## Personal AI vs. Sixb

ChatGPT and Claude give each person superpowers.

But each person works alone. The AI guesses what is true and what is allowed. And the work stays in the chat.

Sixb makes the company work as one. People and agents work from the same picture.

Use any AI you want. They all work from the same picture.



---

## Your systems, working as one. Owned by you.
